# The Factory / February 2011

## Here's everything you need to get started:

### X-Ray Vision Goggles

Use these to peer inside any website, revealing the inner guts. You can also temporarily hack any page using these nifty tricks. Try it out!

'R' KEY:

Replace the element with some HTML

DELETE:

Remove the element

SHIFT + LEFT ARROW:

Undo

SHIFT + RIGHT ARROW:

Redo

You can find the Goggles at  
<https://secure.toolness.com/webxray/>

Learn more about writing HTML:  
<http://labs.toolness.com/dom-tutorial>

### HTMLpad

HTMLpad makes it really easy to code web pages in real time. You can see changes to the code immediately, and even collaborate with friends.

STEP 1:

Visit [etherpad.mozilla.org/\[whatever\]](http://etherpad.mozilla.org/)

STEP 2:

Type or paste in some code

STEP 3:

Visit [htmlpad.org/\[whatever\]](http://htmlpad.org/) (the same address as the etherpad you made)

STEP 4:

Play around on the etherpad to see changes take effect!

### Popcorn and Butter

Popcorn.js (and Butter, the authoring tool) make it easy to create video pages that are connected to the rest of the web: Twitter, Wikipedia, and more.

STEP 1:

Upload your video somewhere

STEP 2:

Visit <https://butterapp.org/butter/> and enter the address to the video

STEP 3:

Add tracks, pick a layout and theme

STEP 4:

Export your movie and try using the code on one of your pages!
